

IP TRANSIT
FROM
£1.49/Mbps

Welcome to our network

Diligently engineered to give you dependable and low latency connectivity

DATA SHEET

IP transit

Our tried-and-true, low-latency IP transit service gives you dependable global reach at a price that will help you to get the most out of your IT budget.

The Internet Connections 10 Gigabit enabled network has been designed with premium service in mind.

Ninety percent of our traffic is exchanged over peering for the best possible efficiency and performance. And those peering relationships are at the largest exchanges in the world: **LINX** and **AMS-IX**. The remaining 10% of our traffic is routed by high quality Tier 1 carriers, such as **Level 3**.

Plus, we've got much sought-after peering with the key eyeball network providers, including both **BT** and **Virgin**.

Our network management policy delivers the reassurance of generous overheads on backbone links: we run at **less than 80% capacity** to rule out congestion.

What's more, we can get you up and running in the time it takes you to get your cables ordered.

Key features

- >> **10 Gigabit MPLS backbone:** choose from a range of bandwidths from 10Mbps to 1Gbps
- >> **Converged services:** take multiple services on one port, including IP transit, P2P and leased lines, delivered in separate VLANs
- >> **Generous backbone overheads:** we run at less than 80% capacity to ensure congestion isn't a problem
- >> **Eyeballs:** peering with the key access providers including both BT and Virgin
- >> **You're in control:** real time traffic graphs, self service reverse DNS, email and SMS network alerts
- >> **No aggregation switches:** all customers are connected to routers
- >> **Peace of mind:** 99.95% money back SLA
- >> **Packet delivery target:** less than 0.5% loss

Get connected. Stay connected.

CLIENT TESTIMONIAL

Having absolute confidence in a network provider is very reassuring. I am happy to say that by choosing Internet Connections we have this assurance.

Simon Chappell, Backup Technology

Technical data

- >> ASN: 34270
- >> Dual-stacked IPv4/IPv6
- >> Per port usage reporting
- >> Primary and secondary DNS
- >> Jumbo frame capable network (up to 9000 byte MTU)
- >> DDoS detection and diagnosis included
- >> Self-healing network architecture (less than 300ms)
- >> Unlimited IP assignments (subject to RIPE)

Service options

- >> Full, Partial or Tier 1 (Level3)
- >> Dynamic BGP or static routing
- >> Gigabit (GigE) fibre or copper interfaces
- >> 10 Gigabit (10Gig) fibre interface
- >> Dual diverse ports for additional resilience
- >> Multiple BGP sessions on a single port
- >> Aggregated billing across multiple ports
- >> Burstable 95th %ile or fixed capacity connection (capped)
- >> Monthly, quarterly or annual Direct Debit options
